

Sun Cream Protection Procedure

Before the administration of sun cream, please check the Parent/Carer has filled in the relevant details on the EYLOG permissions.

Each sun cream product should be clearly labelled with the child's name and date when brought into the nursery, then stored in the basket provided within each room, out of children's reach.

A minimum of Factor 30 Sun cream should be applied at all times during the months of April to September even when cloudy and will need to be applied at regular intervals. Factor 50 is preferred.

Where parents/carers choose to provide home made suncream, a list of ingredients should be listed on the bottle provided with an expiry date.

Parents/Carers must be contacted to bring in suncream if their child has been dropped off without it.

During winter months, all sun cream will be given back to the Parents/Carers and none will be saved at Sunnydale Nursery.

New cream would be required for the following summer period.

The policy was adopted on:	April 2025
Date disseminated to staff:	April 2026
Date for review:	April 2027
